The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand CDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the CDNA between the Notl site and the Oligo-dT track served to verify it as a a clone from the non-normalized embryo at 13 dpc library CDNA Library Preparation:
M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) The following repetitive elements were found in this CDNA sequence: 4-123,
(GAA)n#Simple repeat 143-240, >162_Send#LINE/Li
Seq primer: M13 Forward

This invention relates to a new isolated G-protein coupled receptor

(GPCRX) polypeptide, acid and an antibody specific to the protein
are useful for treating, preventing an antibody specific to the protein
are useful for treating, preventing or alleviating a GPCRX-associated
disorder or a pathological state in a subject, particularly a human. In
pairtcular, the disorder is cardiomyopathy, atherosclerosis, diabetes,
or a disorder related to cell signal processing and metabolic pathway
or medicanearit for prevential processing and metabolic pathway
cc diagnosing the presence of or preddsposition to a disease associated
with altered levels of GPCRX, particularly cancer. The GPCRX nucleic
with altered levels of GPCRX, particularly cancer. The GPCRX nucleic
cc acid and polypeptide are especially useful in the manufacture of a
medicament for therapeutic or prophylactic applications for disorders
associated with aberrant GPCRX syrression or activity, e.g. von
Hippel-Lindau syndrome, Alzheimer's disease, stroke, tuberous
cc atomic obseits, puppercal caemia, Parkinson's disease,
sclerosis, hypercal caemia, Parkinson's disease,
creebral palsy, epilepsy, Lesch-Wyhan syndrome, multiple sclerosis,
disease, infertility, hypertension, scleroderma, haemophilia,
athmitis, human immunodeficiency virus; autoimmune disease,
for treating the above conditions. The polypeptides can be used as
the disease. The DNA encoding the protein is useful in gene therapy
for treating the above conditions. The polypeptides
consumnosens to produce antibodies and as vaccines of the nucleic acids are
further used as hybridiastion probes, in chromosome mapping, tissue
typing, preventive medicine, and pharmacopennous. The puseful
in developing powerful assay system for functional analysis of various
consumers are presented and protein coupled receptor related protein
consumence represented and hybridiastion protein coupled receptor related protein
consumence are processed as hybridiastion probes, in chromosome mapping, the protein
consumence are proc

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity

Claim 20; SEQ ID No 45041; 103pp; English.

The invention relates to isolated polynucleotide (1) and probes, polymeride (11) sequences. (1) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome configuration of (11). The polymucleotides are also used in diagnostics as expressed sequence tags for the infinity expressed genes. (1) is useful in gene therapy techniques to restore normal activity of (11) or to treat disease states involving to restore normal activity of (11) or to treat disease states involving quantitating a polypeptide in tissue, as molecular weight markers and as a fool osupplement. (11) and its binding partners are useful in medical inaging of sites expressing (11). (1) and (11) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                               BBV infected B lymphocytes recapitulate features of antigen stimulation in enlarging, increasing RNA synthesis, expressing activation antigens and adhesion molecules, secreting Ig and proliferating. Unlike antigens etimulated B lymphocytes, BBV infected B lymphocytes continue to proliferate (in vitro) as immortalised lymphoblastoid cell lines. Because of the similar effects of EBV and antigen, EBV induced genes are likely to include mediators of antigen induced B lymphocyte growth or differentiation. (Updated on 25-WAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Assessing, monitoring, foetal development, placental development, Epstein Barr virus, EBV; induced gene 2; EBI-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       7;

                                                                                                                                                                                                       Assessing or monitoring foetal or placental development - comprises detecting the level or size of Epstein Barr virus induced nucleic acid or protein in maternal serum samples
                                                                                                                                                                                                                                                                                      The present sequence was used in the development of a novel method for assessing or monitoring foetal or placental development. The method comprises taking a maternal serum sample, and detecting the level or sizé of Epstein Bark virus (EBV) induced gene or protein 3 (EBI-3) to obtain a result, which can be compared to a control to assess or monitor foetal or placental development.
                                                                                                                                                                                                                                                                                                                                                                                                                  Length 361;

The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRS, AAY90643-CAAY90677 and AAA30779-A30773 and AAA30779-A30779). The mutant proteins of the invention contain a and AAA30779-A30779). The mutant proteins of the invention contain a contain a portion of the protein comprising intracellular loop 3 (CO3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, X, is substituted for an endogenous residue in IC3 at a position 16 amino acids N-terminal of an endogenous proline in TM6 to form a sequence of a substituted for an endogenous maino acid is selected from Lys, His, Arg or Ala, and is preferably Lys. When the endogenous residue at this or Ala, and is preferably Lys. When the substituted amino acid and the Process of a modern or an anix or a mixture of endogenous and may be endogenous, non-endogenous, or a mixture of endogenous and con-endogenous, non-endogenous, or a mixture of endogenous and partial agonists for use as particular grounds the roles of the receptors in normal and partial agonists for aluidating the roles of the receptors in normal and settings for aluidating the roles of the receptors in normal and discorders as associated with that receptor. Because the novel mutant GPCRs are constitutively active, they can be useful for the novel mutant GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous and incenting of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        241 GCLLTLIMLVAVVVCFSPYHLNIKQFMARGM--LHLPSCAERRAFILSLQATVALMMMNC 298

The present invention describes antigenic peptides (I) comprising:

(a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino caids. Also described: (I) an assay for the detection of a particular of protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific an inclody against a particular GPCR, and in the production of specific an inclody against a particular GPCR, and in the production of specific an antibodies. The peptides and antibodies are useful for disagnosting one descriping for gresence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for disagnosting and designing drugs for treating immune-related diseases, immunological-related diseases, coll regeneration-related diseases, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections, costeoarthritis, osteoprosis, ancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, pain, psoriasis, considers anxiety, depression, schizophrenia, dementia, member, peraves host disease, elementia, perepagance, perepagance, or anxiety, depression, schizophrenia, dementia, mental retardation, memory consistention, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be G protein-coupled receptor; GPCR; antigenic peptide; gene therapy; G protein-coupled receptor modulator; antibody; immune-related disease; growth-related disease; cell regeneration-related disease; Annew disease; atheroscient disease; autoimmunological-related cell proliferative disease; autoimmune disease; Alzheimer's disease; atheroscierosis; infection; osteoarthritis; allergy; osteoporosis; cardiomyopathy; inflammation; Crohn's disease; diabetes; graft versus host disease; Parkinson's disease; multiple sclerosis; pain; psoriasis; anxiety; depression; schizophrenia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; obesity; nausea; hypertension; hypotension; renal disorder; rheumatoid arthritis; trauma; New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, GITPIIYFFASTHYRKWLLGILKLKGSSSSSSSSSSSTPGKAS---SETPSITQARGS 352 302 CMDPFIYFFACKGYKRKWMRMLKRQUSVSISSAVKSAPEENSREMTETQMMTHSKSS 358 Human EBV-induced gene 2 protein SEQ ID NO:112. fungal infection.

Homo sapiens.

```
The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-C AAY90677 and AAA30779-A307743 and to DNA encoding them (AAA30779-A30779). The mutant proteins of the invention contain a mutation in a portion of the protein comprising intracellular loop 3 (IC3) and transmembrane domain 6 (TM6). A non-endogenous anno acid, X, cisubstituted for an endogenous residue in IC3 at a position 16 amino acids N-terminal of an endogenous proline in TM6 to form a sequence of acids N-terminal of an endogenous amino acid is selected from Lya, His, Arg or Ala, and is preferably Lya. When the endogenous residue at this position is Lys, this residue is replaced by His, Arg or preferably Ala. The 15 amino acid stretch between the substituted amino acid and the Promay be endogenous. In on-endogenous, or a mixture of endogenous and on-endogenous and partial agonists for use as identifying antagonists, agonists and partial agonists for use as planamaceutical agents. The mutant proteins are also useful in research settings for elucidating the roles of the receptors in normal and diseased conditions. Antagonists for a particular GPCR are useful for treating diseases and disorders associated with that receptor. Because the novel mutant GPCRs are constitutively active, they can be used the novel mutant GPCRs are constitutively active, they can be used constitutions. Antagonists AAY90677 and AAY90683-Y90687 the mutant constitution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    invention.

The invention relates to human novel polymucleotides and associated colypeptides. The polymucleotides and polypeptides are useful for treating inflammatory conditions such as arthritis, nephrities, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis, immune responses and cancer and for promoting wound healing. The sequences are used to induce the proliferation of neural cells and respensation of nerve and brain tissue, and are useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's disease, parkinson's disease, Huntington's disease and amyotrophic lateral.

Crossis: The sequences are involved in chemotactic or chemokinetic activity, regulation of hasmatopolesis, treatment of myeloid or lymphoid cut disorders and platelet disorders such as thrombostyopenia, cell disorders and platelet disorders such as thrombostyopenia, cell disorders and platelet disorders such as thrombostyopenia, cell such activity, regulation of bone, our artilage, tendon, ligament and/or nerve tissue crossis, osteoarthritis, bone degenerative disorders in and pariodontal cyprection or regeneration and treatment of lung or liver fibrosis, concention or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, immune deficiency (SCID), bacterial or fibrogic influding sevener combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders eq. multiple sclerosis and mysathenia conditions such as asthma, thrombolysis or thrombosis and now inverviewed the invention injurer inventions of the invention are also threamed the and an expresent human and the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the propertion of the invention of the invention of the invention of the invention of the propertion of the inv

Sequences AAU25554-AAU25616 represent human G-protein coupled receptor (GPCR) polypeptides of the invention. The proteins and their associated boly sequences can be used to identify compounds which bind to GPCR polypeptides and in screening for compounds that modulate GPCR activity. By screening a human subject for the presence of mutations in GPCR DNA, a GPCR-related disorder or a genetic predisposition can be diagnosed. The sequences can also be used for treatment and prevention of mental disorders such as schizophrenia, attention deficit disorder, anxiety, depression, dementia and bipolar disorder, neurological disorders such amitangological disorders such as obseity, anorexia and type 2 diabetes, cardiovascular disorders such as thrombosis, myocardial infarction, cardiomyopathy and atherosclerosis, viral infections caused by HIV and
                               Human; G-protein coupled receptor; GPCR; mental disorder; schizophrenia; attention deficit disorder; anxiety; depression; bipolar disorder; neurological disorder; Huntington's disease; dementia; obesity; anorexia; metabolic disorder; Parkinson's disease; Tourette's syndrome; thrombosis type 2 diabetes; cardiovascular disorder; myocardial infarction; cancer; cardiomyopathy; atheroscalerosis; human immunodeficiency virus; HIV; viral infection; immunostimulant; neuroleptic; nootropic; tranquiliser; antidepressant; anorectic; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated nucleic acid encoding a new G-protein coupled receptor polypeptide for detecting receptor modulators that can treat mental disorders, such as schizophrenia, anxiety, depression, or obesity -
Protein-Coupled Receptor (GPCR) polypeptide #35
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Lind
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 35; Page 83; 279pp; English.

The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-CC AAY90677 and AAA30709-A30743 and AAA30779-A30779). The mutant proteins of the invention Contain a mutation in a portion of the protein comprising intracellular loop 3 (IC3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, X, is substituted for an endogenous residue in IC3 at a position 16 amino acids N-terminal of an endogenous proline in TM6 to form a sequence X-(AA)15-pro. The endogenous amino acid is selected from Lys, His, Arg or AA,15-pro. The endogenous amino acid is selectably the endogenous is preferably tye. When the endogenous residue at this position is Lys, this residue is replaced by His, Arg or preferably the ready of stretch between the substituted amino acid and the Proc TM is a mino acid stretch between the substituted amino acid and the Proc TM is be endogenous. An endogenous and con-endogenous residues. The constitutively acive GPCRs are useful for identifying antagonists, agonists and partial agonists for use as constitutional agents. The mutant proteins are also useful in research setting diseases and disorders associated with that receptors. Because the novel mutant GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous considers. Non-endogenous constitutively activated human G protein-coupled receptors, useful for identifying agonists for use as pharmaceutical agents G protein-coupled receptor; GPCR; constitutively active; intracellular loop 3; transmembrane domain 6; drug screening; agonist; antagonist; mutant; mutein. Human mutant G protein-coupled receptor GPR17 (V234K). Example 2; Page 233-234; 341pp; English. Behan DP, Chalmers DT, Liaw CW human GPCRs of the invention 99WO-US23938.                                                                                                                                                                                 pCR using two primers (AAO66174, AAO66175) was performed to amplify a partial sequence of the R20 seven transmembrane coding sequence which was later used as a probe for isolating the R20 genomic clone (AAO66176) from a human placenta DNA library. During the Isolation of the R20 gene, two weakly hybridising sequences were identified which had significant homology to other seven transmembrane receptors. The probe was used to screen a human genomic foetal liver DNA library, and while the R20 gene could not be identified in this library, several weakly hybridising clones were plaque purified, subcloned and sequenced. The two clones were designated (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               36 PYTALLVFSALGNILALCLTCQKSRKINCTGIYLVHLAVSDLLFTVALPGRVVCYVLGSS

immunology; inflammation; R12.
                                                                                                                                                                  A novel human 7-transmembrane receptor (AAW07617) has been putatively identified as a G-protein thrombin receptor. Its amino acid sequence was deduced from a cDNA clone (AAT4402) discovered in a human infant brain cDNA library. Recombinant receptor can be produced in host cells (e.g. E. coli, COS-7, Sf9) and used to raise antibodies or to screen for (antipagonist cpda. Agonists can be used to treat e.g. haemophilia or to promote wound healing; antagonists can be used to treat inflammation, angina,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents the human R12 protein which is encoded by the full length genomic R12 clone (AAV18356) which was isolated from a human genomic fetal liver DNA library. The invention claims for the full length V28 genomic DNA sequence (AAV18343) isolated from a human placenta genomic library. The V28 (AAW48722) and R12 proteins are seven transmembrane (T7M) receptors which are probably involved in signal by an an be used to produce the recombinant polypeptide, to produce antiev28 antibodies or in screening assays for V28 agonists or antagonists. The antibodies, agonists and antagonists could then be used to modulate V28 receptor-ligand binding, for e.g. in immunological and/or inflammatory events in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   96 WPFGKGLCRLTAFVLYTDTYGGVYLMACVSVDHYPAVVCAHWGPRLRTAGRARLVCVAIW

The coding sequence for the present sequence may be used for gene therapy for diseases such as cancer.

The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-CC AAY90677 and AAA9079), and to DNA encoding them (AAA3079-A30779) and transmembrane domain 6 (The invention contain a materion in a portion of the protein comprising intracellular loop 3 (1C3) and transmembrane domain 6 (TMG). A non-endogenous amino acid, X, is substituted for an endogenous proline in TMG to form a sequence of soids N-terminal of an endogenous proline in TMG to form a sequence of the substituted form and sequence of acids N-terminal of an endogenous maino acid is selected from Lys, His, Arg or Ala, and is preferably Lys. When the endogenous residue at this or Ala, and is preferably Lys. When the substituted amino acid and the Process of the acid and an endogenous, non-endogenous, or a mixture of endogenous and may be endogenous, non-endogenous, or a mixture of endogenous and connendogenous residues. The constitutively active of endogenous and partial agonists for use as pharmaceutical agents. The mutant proceins are also useful for settings for elucidating the roles of the receptors in normal and streating diseases and disorders associated with that receptor. Because the endogenous and disorders associated with that receptor. Because the endogenous and disorders associated with the constitutively active, they can be useful for the present sequence represents a human wild-type GPCR referred to in an exemplification of the invention.
Non-endogenous constitutively activated human G protein-coupled receptors, useful for identifying agonists for use as pharmaceutical
                                                                                                                                                                                                                                             Example 1; Page 126-127; 341pp; English.

                                                                                                                                                                                                                                                                                                                                     Length 339;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1,000 to US20020155528A1

Patent No. US20020155528A1

GENERAL INTERNATION:

APPLICANT: Xiao, Yonghong

TITLE OF INVENTION: Regulation of Human CysLT2-Like GPCR

TITLE OF INVENTION: Protein

FILE REFERENCE: 04974.00458

CURRENT APPLICATION NUMBER: US/09/828,478

CURRENT APPLICATION NUMBER: 60/195,196

PRIOR PRILING DATE: 2000-04-09

PRIOR FILING DATE: 2000-14-09

PRIOR FILING DATE: 2000-12-13

NUMBER OF SEQ ID NOS: 16

SEQ ID NOS: 16

IENGTH: 339
                                                                                                                                                                                                                                                                                                                                                                         Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DB 10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match 20.9%; Score 391.5; DB 10; Best Local Similarity 30.5%; Pred. G protein-manual schouse mouse)
C,Species: Mus musculus (house mouse)
C,Species: Mus musculus (house mouse)
C,Accession: JC5498
R,Methner, A.; Hermey, G.; Schinke, B.; Hermans-Borgmeyer, I.
Biochem. Blophys. Res. Commun. 233, 336-342, 1997
A,Title: A novel G protein-coupled receptor with homology to neuropeptide and ch A,Reference number: JC5498; MUID:97289630; PMID:9144535
A,Contents: Brain
A,Accession: JC5498
A,Molecule type: mRNA
A,References: GB:U79525; NID:q1732346; PIDN:AAB53769.1; PID:g1732347
C; Comment: This protein is involved in the bone metabolism.
C; Superfamily: vertebrate rhodopsin
F;110-187/Disulfide bonds: #status predicted
